

# CONTENTS

## Previous Years' Papers—Fully Solved

### ● Important Formulae

	<b>3–4</b>		
1. Atomic Structure	5–12	21. Elements of Nitrogen Family (Ammonia, Nitric Acid)	148–155
2. Valency	13–19	22. Elements of Oxygen Family	156–160
3. Radioactivity and Nuclear Energy	20–26	23. Halogens	161–164
4. Oxidation and Reduction	27–32	24. Coinage Metals	165–168
5. Chemical Equilibrium	33–42	25. Elements of Zinc Family	169–171
6. Ionic Equilibrium	43–52	26. Iron	172–176
7. Chemical Kinetics	53–57	27. Transition Elements	177–178
8. Calculations based on Chemical Equations and Volumetric Analysis	58–73	28. Inert Gases	179–182
9. Gaseous State	74–81	29. Purification of Organic Compounds, Element direction, Empirical Formula and Molecular Formula	183–188
10. Thermo-chemistry	82–87	30. Organic Reactants Reactions, Classification of Compounds and Nomenclature	189–194
11. Electrode Potential and Electrochemical Series	88–92	31. Isomerism	195–201
12. The Colloidal State	93–96	32. Alkanes, Alkenes and Alkynes	202–209
13. Catalysis	97–101	33. Halogen Derivatives of Alkanes	210–214
14. Solution and Distribution Law	102–109	34. Alcohols	215–222
15. Periodic Classification and Periodic Properties of Elements	110–118	35. Aldehydes and Ketones	223–228
16. Ores and Extraction of Metals	119–123	36. Monocarboxylic Acids and Derivatives of Fatty Acids	229–234
17. Hydrogen and its Compounds	124–128	37. Aliphatic Amines	235–239
18. Alkali Metals, Alkaline Earth Metals and Their Compounds	129–136	38. Fats, Oils, Wax, Soaps and Urea	240–243
19. Aluminium and Alums	137–141	39. Carbohydrate and Our Food	244–247
20. Elements of Carbon Family (White and Red Lead)	142–147	40. Ethers	248–249
		41. The Aromatic Compounds	250–260
		42. Petroleum	261–264
